CAREER HISTORY

Nimble Approach— Senior Software Developer

OCTOBER 2022 - PRESENT

Worked for various different clients helping with full stack development in .NET and React. Helped add new features to a NextJs app that has tens of thousands of users making sure we had 0 downtime deployment as well as monitoring error tracking using tools like Grafana. I also worked on a .NET microservice based application which will process orders in a queue. During my time at Nimble I have also gained experience in working directly with clients to manage expectations and help guide architectural designs whilst also working within their guidelines

Squad Stats— Owner

(<https://squadstats.smithtech.dev/>)

September 2020 - PRESENT

Created a VueJS app which can track the statistics of local football teams. Has a ranking based algorithm to help football teams pick fair teams of their 5-a-side matches. Complete with graphs showing player progress and ways for league admins to customise their version of the site. Whilst working on this project I also created an internal package library to share across all my projects with a design system to give all apps a consistent feel. During this project I also learnt how to deploy Apps to the Android store by packaging Progressive Web Apps as Android Apps.

3Squared — Senior Software Developer

NOVEMBER 2018 - PRESENT

Responsible for tech leading 3 different projects from inception to delivery, including an in-house authentication library, a training tool and a greenfield project as a proof of concept for the RSSB.

Lead the decision making in deciding how to move from legacy ASP.NET Webforms applications to modern SPA applications using VueJS and Typescript.

Create and maintain the internal Design System/Style Guide as an npm package that is used across the whole business in many different projects.

Help promote best practices by creating many internal nuget packages that aim to solve a lot of common problems developers face across the company.

Collaborate with many different teams to encourage an agile way of working, including running scrums and managing backlogs.

Worked on the HS2 project to create a realtime application to manage many moving parts in a yard, making heavy use of SignalR.

SKILLS

C#
VueJS
.NET Core
JavaScript
Typescript
ASP.NET Core
React
Angular
Cypress
HTML
SASS
MVC
JQuery
Bootstrap
XML/JSON
Entity Framework
Unit &
Automation
Testing
SQL
Git

INTERESTS

Squash
Board Gaming
Game
Development
Web Development

NoMoreBinDays — Co-owner

(<https://nomorebindays.co.uk/>)

FEBRUARY 2020 - PRESENT

During lockdown my wife and I created a website to help address the lack of information on where to recycle products that aren't accepted in our household bins. This was borne out of a desire to both give something back to the local community and challenge myself as a developer.

As the sole developer this was a great opportunity for me to create a full stack application outside of a working environment as I had to step outside my comfort zone and learn things such as:

- GitHub Actions and deployments
- Hosting via Firebase
- Working with NoSQL databases
- Designing the software and considering responsive design

SEAMS LTD — Senior Software Developer

JULY 2018 - NOVEMBER 2018

Responsible for leading new projects and providing guidance to other developers, as well as working with others to implement excellent software architecture and patterns to provide a foundation to build future applications.

Organising and managing project deadlines including estimating large projects and providing realistic solutions to stakeholders.

Converting an older web application to use modern technologies such as Typescript, VueJs, Webpack and Babel.

SEAMS LTD — Software Developer

MARCH 2016 - JULY 2018

Responsible for increasing the web development capability of the team by introducing new techniques and patterns to improve the quality of the UX and general code.

Gathering requirements from clients to create the software they want in a timely manner.

TRIBAL GROUP — Software Developer

SEPTEMBER 2013 - MARCH 2016

Responsible for creating configurable education software using ASP.NET and WPF for the tracking of student attendance and assessment results.

Creating responsive websites where teachers can mark students' attendance and add behaviour records on a range of mobile devices.

Maintaining one of the largest global education contracts for NSW, Australia which involve rapid development and finding quick solutions to address customer concerns.

KEY SKILLS AND COMPETENCIES

- Fluent in C#, JavaScript and Typescript
- Contributing to Open Source
- Creating useful applications that help people
- Passion for learning new technologies and investigating in free time.
- Willingness to help others and share knowledge.
- Experience gathering requirements from clients.
- Ability to write efficient SQL queries
- Ability to work to deadlines and cope under time pressure
- Work well in a scrum team in an agile environment
- Passion for writing good quality code and developing interesting, functional software
- Good at communicating with customers, analysts and management
- Experience writing unit and Automation tests.

ACADEMIC QUALIFICATIONS

University of Hull — *BSc Computer Science with Games Development* (2:1)

SEPTEMBER 2010 - JUNE 2013

Guiseley School Sixth Form College

SEPTEMBER 2008 - JUNE 2010

Maths (B) ICT (C) History (C)
